Rider ILR – Interruptible Load Replacement Energy Service (Cont.)

Interruptible Requirements

- Customers must allow the Company to interrupt the curtailment portion of the customer’s load via automatic controls in accordance with the terms of that customer’s Interruptible Power Service Rider or Curtailment Service Rider within:
 - 10 minutes notice of an interruption called by the Company; or
 - 10 minutes notice from MAPP requesting that the Company drop interruptible load.
- Customers taking service under this Rider will be required to participate in testing to certify interruptible demand levels for each MAPP season.

Energy Changes

- Class A: Purchase Price x 1.0726
- Class B: Purchase Price x 1.0500
- Class C: Purchase Price x 1.0083

Where:

Class A refers to customers whose service is metered at secondary voltages;

Class B applies to customers whose service is metered at primary voltages; and

Class C refers to customers whose service is metered at primary or transmission voltages and who are directly served from substations; and

Purchase Price is the lesser of the total cost per kWh, including all delivery and ancillary service costs, incurred by the Company:

- in purchasing and delivering energy under MAPP Schedule L, Interruptible Load Energy Service or
- in generating and delivering energy under utility self-generation alternatives to MAPP Schedule L Interruptible Load Energy Service.

Such Purchased Price will recover costs incurred to meet the customer’s Certified Interruptible Demand for the duration of the Company’s declared curtailment period.
